

Employees Loan Management System (ELMS)

Document Type: Business Analysis Requirements Specification (Discovery Phase)

Client Organization: TTS Company (BFSI Software Development Services)

Initiative / Project Name: Employees Loan Management System (ELMS)

Stakeholder Groups: TTS Employees, Human Resources Department, Accounts & Finance Department, Payroll Operations, Executive Leadership

Compliance Standards: BFSI Security Guidelines, Role-Based Access Control (RBAC), Data Confidentiality Standards

1. Organization Background & Discovery Context

TTS Company is a multinational enterprise providing specialized software development services in the Banking, Financial Services, and Insurance (BFSI) vertical. With multiple enterprise software solutions deployed globally, TTS Company maintains an active Research and Development (R&D) wing focused on continuous product enhancement and innovation, maintaining its market position among the top 10 global software providers in the BFSI sector.

As part of its corporate employee welfare program, TTS Company has sponsored an initiative to provide accessible internal financing and loan facilities to its global workforce based on verified eligibility criteria. To transition away from manual spreadsheets and paper-based loan applications, TTS Company has commissioned the design and development of an automated, end-to-end **Employees Loan Management System (ELMS)**.

2. Case Study Problem Statement & Business Narrative

The current employee loan administration process at TTS Company is managed across disparate communication channels and manual reviews, leading to operational friction, delayed approvals, lack of audit trails, and reconciliation overhead during monthly payroll cycles.

The proposed **Employees Loan Management System (ELMS)** will provide a centralized digital platform enabling eligible employees to apply for personal loans online. The platform must orchestrate a collaborative multi-department review workflow involving both the Human Resources (HR) and Accounts departments:

- **Application & Eligibility Elicitation:** Employees submit loan applications via a self-service portal, providing requested amount, tenure, and purpose. The system checks initial policy parameters (such as employment tenure and existing commitments).
- **Dual Review & Evaluation Workflow:**
 - **HR Review:** Evaluates applicant eligibility, service tenure, performance standing, and internal policy compliance.

- **Accounts Review:** Conducts financial viability assessments, debt-to-income (DTI) ratio calculations, cash flow impact reviews, and repayment feasibility analyses.
- **Rejection Handling:** If an application fails eligibility or financial checks, the system must formally inform the employee of the specific rejection reasons (e.g., tenure under mandatory policy thresholds or DTI exceeding caps), referencing the employee handbook, and defining future reapplication eligibility.
- **Approval, Formal Acceptance, & Automated Recovery:** Upon dual approval, the system must generate binding Loan Approval Terms & Conditions and a structured Repayment Schedule (principal, interest rate, tenure, and installment schedule). Disbursement requires explicit digital acceptance from the employee. Once accepted, the system triggers automated payroll salary deductions on scheduled cycles and credits the funds directly to the employee's registered salary account.

3. Scope & Functional Requirements Summary

Requirement ID	Feature Area	Functional Description
FR-ELMS-01	Employee Self-Service Portal	Secure portal allowing employees to view eligibility criteria, calculate EMI estimates, submit loan requests, upload supporting documents, and track real-time status.
FR-ELMS-02	HR Evaluation Module	Interface for HR personnel to verify employee standing, tenure guidelines, past performance records, and policy parameters before passing recommendations to Accounts.
FR-ELMS-03	Accounts & Financial Risk Module	Assessment module for the Accounts department to evaluate debt-to-income ratios, determine interest rates (if applicable), configure repayment terms, and assess liquidity.

FR-ELMS-04	Automated Notification & Acceptance	System-driven notification engine dispatching structured formal rejection notices or legally binding approval agreements with interactive acceptance triggers.
FR-ELMS-05	Payroll Integration & Recovery	Automated integration with TTS enterprise payroll system to execute scheduled salary deductions, updating ledger accounts atomically upon payroll execution.

4. Non-Functional & Regulatory Constraints

- **BFSI Data Confidentiality:** Loan amounts, personal salary details, and reasons for rejection must be protected with Role-Based Access Control (RBAC) and data encryption at rest and in transit.
- **Audit & Compliance Trail:** Every approval, review comment, rejection notice, and employee acceptance must be logged with immutable user IDs, timestamps, and IP addresses for internal and statutory audit purposes.
- **Reporting & System Integration:** Support for enterprise reporting platforms (SSRS, Crystal Reports, Power BI/Tableau) connecting directly with relational database schemas to produce automated deduction and disbursement records.

5. Analysis & Deliverables Checklist (Business Requirements Ask)

Based on the elicited case study specifications, the Business Analyst must formulate, structure, and detail the following functional and reporting deliverables:

1. **Accounts Department Reporting Specifications (Req 1):**
Identify and define a minimum of five operational and financial reports that the Accounts Department must generate to ensure cash flow forecasting, payroll recovery, and audit compliance across the loan lifecycle.
2. **HR Rejection Communication Framework (Req 2):**
Define the structured anatomy and professional template of the notification message/email sent from the HR department to an employee when a loan application is rejected, detailing required fields, policy references, and reapplication terms.
3. **HR Approval & Terms Communication Framework (Req 3):**
Define the structured format and legal binding elements of the communication message/email sent from the HR/Accounts department to an employee upon loan

approval, detailing financial terms, repayment schedule breakdown, and acceptance triggers.

4. **Loan Applications Received Pipeline Report Design (Req 4):**

Design a sample operational report layout representing incoming loan applications received by the Accounts department, including application IDs, submission dates, applicant details, requested amounts, service tenures, workflow statuses, and summary pipeline metrics.

5. **Enterprise Reporting & Analytics Tooling Strategy (Req 5):**

Formulate the reporting and business intelligence (BI) technology strategy for ELMS, categorizing tools across data visualization, pixel-perfect document generation, database scheduled reporting, spreadsheet audits, and cloud BI platforms while addressing BFSI data security standards.
